

## BARRIER RAILS

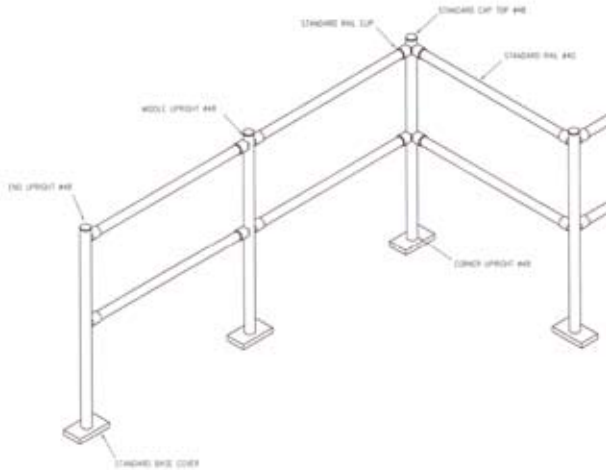

We offer a flexible, modular customer guidance system which can be used to guide customers in a particular direction, or act as a physical barrier.

The standard fixing makes it easy to vary the design and the rails and uprights are available in a number of heights and lengths.

## Barrier Rail

CUSTOMER GUIDANCE

Barrier Rail is an ideal solution for sectioning off areas to fixed queue management or pedestrian guidance system either on its own or alongside entrance gates. It can also form a screen or barrier to keep things in or out. However it is not for use as balcony or stairway balustrade or stadium crash barrier ITABmk produces a complete modular range of standard uprights, cross-rails and connecting cups in such a variety of finishes and colours that Barrier Rail is suitable for almost any situation. It can be co-ordinated with corporate colours, made bright and visible for warehouse areas, or finished in satin chrome for a stylish front of house environment.

Standard and optional features:

### Design:

- Column Uprights & Cross-rails are constructed from Mild Steel
- Column Uprights have a diameter of 48mm with the cross-rails being 40mm
- Standard height is 1060mm, however a full range of other heights are available: 1165mm/1250mm/1600mm/2000mm
- Cross-rails are available in numerous lengths: 1m/1.5m/2.0m/2.5m to suit all requirements

**Options:**

- Finishes: Bright Chrome Plate/ Polyester Powder Coated/ Stainless Steel/ Satin Chrome
- Colours: Polyester Coating available in any RAL colour on request
- Top Caps/ Connecting Cups Construction: Nylon Top Caps, PVC Connecting Cups , or Aluminium top cap and cups
- Top caps/connecting cups colours: Black, Red, White, Orange, Cream, Light Grey, Dark Blue & Dark Green or matching aluminium
- Panel clips: variety of plastic and aluminium options in colours or polishes (aluminium)

### Order Information

Can be supply only or fully installed. Please specify all options, lengths & configurations at time of order.

# Modular Balustrade & Handrails

CUSTOMER GUIDANCE

ITABmk can provide you with handrail and balustrade solutions that comply with all necessary Building Regulation requirements and British Standard recommendations for structural stability, safety and accessibility.

We work as a complete supply and fit service from producing quotations from architects' drawings or bills of quantities to on-site measurements, production drawings for customer approval, manufacture and then install on site. So whatever the project, whether a hospital, school or bank, offices, etc. we can ensure a quick delivery, and a speedy installation once on site. In particular, our systems conform to BS 6180 and BS 6399 and, where glass infill panels are used, to the safety recommendations of BS 6206, Class A. They will, therefore, be acceptable for both new construction and for the refurbishment of buildings used by organisations whose activities are subject to the Disability Discrimination Act.

The exceptional finish to our products and our attention to detail ensures a high quality installation. Our Modular Balustrade is aesthetically superior as there are no unsightly welds, no sharp edges or angles.

Standard and optional features:

## Design:

- ITABmk balustrades consist of the following components: top rails, uprights (painted if desired), infill, infill panel holders.
- The top rails and uprights of our balustrades are constructed from stainless steel satin finished, with stainless steel (satin finished) bends and connections
- All top rails have an outside diameter of 50mm.
- The top rail and infill panels are demountable, making it easy to repair the balustrade without damaging the surroundings.
- Our balustrade infill is available in as 10mm toughened safety glass with other options available on request.
