

FLEXIGATE

Our Flexigate gate represents an easily installed and flexible entrance system, with a new design saving valuable store floor space. By painting the post shields in the appropriate profile colours you can make the system merge into your own store concept.

The design is compact and, in a small space, satisfies high demands for security, performance and functionality. The Flexigate offers many different combinations: single and double gates and parallel or saloon door configurations. The gates come with many safety features, such as finger trapping protection and emergency breakout. The operation of the gate can be controlled by push button, remote control, radar or photocell.

Have your own unique design

As standard the system is supplied in chrome with black powder coated side panels. This gives good resistance to impact damage from supermarket trolleys or cleaning equipment. You can choose to tailor the look of the gate

to your own colour finish. The separate cover casings on the gate body offers a great deal of freedom. We will paint the panels to your own specification, and special casings are also available in stainless steel.

Simple service and installation

The design of the Flexigate with its separate cover casings means that installation, inspection and servicing can be easily carried out. On servicing, only the front panel needs to be removed, as the internal load-bearing frame contains all the important electronic and mechanical functions. The Flexigate is based on the same reliable and trouble-free engineering as our much-valued Easygate.

TECHNICAL DETAILS

Standard version	
Passage function	Standard, Welcome and Secure
Opening function	Radar or photocell
Adjustable opening time	1-10 sec
Adjustable alarm time	1-10 sec
Break-out	Adjustable break-out with adjustable audible alarm
Safety	Zero finger traps
